

APICS Chicago CSCP Six-Week Course Outline

With Ten-Week Schedule

The APICS-Chicago CSCP Course instructors use the CSCP Learning System which is a combination of online learning and classroom discussion. The coursework requires focus, dedication, discipline, and time on the part of the learner. Feedback from those who have studied for and passed the exam indicates that you should plan for studying a minimum of 125 hours, Plus class time, should be planned for.

You should plan on registering 3 weeks prior to the first class so that we can order your materials, set-up your personal sign-in for the e-learning part of the course, you can familiarize yourself with the online tools, and take the Pre-course Test which establishes a CSCP learning-baseline for this course prior to the first class.

The course consists of the following.

- Three print modules (five books) containing more the 950 pages of material (plus references to optional readings)
- Booklet of slides relating to the printed materials (only with APICS-Chicago instructor lead classes)
- Pre- and post-course tests
- Module-specific tests
- Online glossary
- eFlashcards

Due to the professional level and amount of the materials, the learning process is not so much a transfer of new knowledge by an instructor but more of a sharing of the ideas studied being facilitated by qualified certified CSCP APICS-Chicago instructors. We strongly recommend that the participants read the materials, complete the print progress checks, complete the online tests, and be prepared to discuss the CSCP concepts for each module prior to each class dates. The facilitators have e-tools enabling them to track the online progress of participants to assist in their individualized learning process.

Six-Week Class Agenda & Ten-Week Schedule

2017			
Week	Hours	Session	Agenda
